Circulation: (573) 882-4153
Quick Start Guide

Connecting the Projector to a Computer:
1. Plug the RGB Cable into the “Comp 1” Input on the back of the projector. #2 in diagram
2. On your PC find the compatible input, and plug the other end of the RGB cable in
3. Plug the audio cable into the headphone jack or auxiliary sound jack on your PC
4. Plug the corresponding end into the projector “Audio In” jack; #6 in diagram
5. Take the lens cap off the projector
6. Press power button on projector
7. Navigate to what you want to project on your PC
8. Adjust focus/zoom on projector for clarity

Source:
Comp 1 & Comp 2 source input requires RGB cable for use, must plug into corresponding Comp 1 or Comp 2 port on PC

Other Source Options:
HDMI: HDMI cable not provided with this device; video, analog video out
S-Video, PS2 cable not provided with this device; analog video out

*This quick start guide only covers using the projector with a PC, other cables are required for use with a MAC.

Uses for a Projector:
- Presentations
- Holiday decorating
- Viewing movies
- Viewing videos
- Movie night in backyard
- Role-playing games
- LAN party
- Really large monitor
- Use of any multimedia materials
- Church services
- Meetings notes or diagrams

Powering off Projector:
1. Locate remote
2. Locate power button
3. Press power button twice to turn the device off

*Cables needed for other source options not owned by Health Sciences Library: PS2, HDMI and Dongle for MACs. If needed must provide your own cable.*
